Movable Shields.

The movable shields are designed to protect staff members while working with patients and products which can be radioactive.

The shields can be easily moved around and have brakes to ensure that they will stay in place while working.

High quality non marking casters are used to ensure easy movement.

Also the shield can be fitted with lead glass for a more ergonomic work environment.

Patients can be threatened in their ward simply place the shields around and inject them.

Various lead thickness can be used also a wide variety of shapes and size lead shield are available.

Please contact us for a shield to meet your specifications.
