Shielded Cleaning Trolley

The shielded trolley is designed to clean-up spilled fluids in a radioactive environment.

The fluids can be mopped up and the mop and water can be stored safely till the activity is well under safety levels and can be disposed.

The inside of the trolley is made of forged stainless steel round edges and no welding inside ensures easy and proper cleaning after use

High quality non marking casters with break are used for easy movement and placement.

Various sizes and lead thickness are available from 3 till 20mm.
