

SHIELDED DRAWER SYSTEMS

Kwint shielded drawer systems are designed to protect you and your employees against harmful radiation during work and storage, using high quality materials, a safe and easy to work with system is produced. A wide variety of configurations is available with 2 sizes of drawers and lead thickness between 5 - 50mm, Easy to clean. Completely welded drawers ensures fire safety for dangerous materials. Fabrication according to different international guidelines ensures safe storage of materials in case of fire (fire resistant's of 60 minutes) . . A high quality bearing system makes sure the drawers are easy to open and close. Lockable drawers ensure that unauthorised personnel have no access to the products stored inside.

Drawer systems are only produced in stainless steel (although we don't show you the right pictures..)
